

MIDAS - Bond Opportunities A - Acc

Monthly summary report | as at 31 March 2018

Investment Objective

The fund seeks to achieve capital appreciation over the medium term by investing in a diversified portfolio of Euro-denominated fixed income securities (investment-grade corporate bonds, government bonds, high yield and emerging market debt as well as convertible bonds). The main focus is put on bottom-up selection. Interest rate as well as credit risks are managed actively.

Market Review

After a peak of volatility in February, the VIX index remained at high levels during the month of March, ranging between 15 and 25. Markets sold off sharply during the month hopping from trade tensions between US and China to Tech sell-off as excuses to pocket in profits and step up risk aversion gauges. While both trade tensions and the Tech sell-off are acknowledgeable fears, they should not be enough to disrupt a well engaged economic cycle. However, added to slowing down macroeconomic data, these risks worried investors, questioning the scenario of strong growth all over the places. Long Run inflation expectations, triggered by surprising hourly earnings in February, remained the backdrop of the interest rates evolution. With salary data reviewed to lower levels in March and inflation statistics in Europe below expectations for several countries during the month, the 10 Year EU Bund fell from 0.66% to 0.50%. In that context, the credit indices remain resilient with an iTraxx Europe widening of 2bp (considering +6bp for Roll-over) to 58bp and a Cross-Over index tightening of 10bp (considering +31bp for Roll-over) to 285bp.

Portfolio Performance

During the month, the fund lost 0.50%, essentially driven by the risk aversion movement experienced by the overall market, which translated into a widespread widening. To reflect our more prudent stance, we have continued to increase our high grade corporate bonds bucket (from 38% to 43%) and the duration has been increased (from 2.9 to 4.3).

Market Outlook

The most important thing in such late-cycle environment is reactivity, best expressed by high cash levels easily repositioned after such sell-offs to enjoy fast unfolding rallies. Current levels are closely watched as entry points to reduce again the duration of the fund.
